U of Alberta EndNote Full-text Configuration

- Go to Edit/Preferences/Find Full Text
- Enter the following into the OpenURL Path box: http://resolver.library.ualberta.ca/resolver
- Enter the following into the Authenticate with box: http://login.ezproxy.library.ualberta.ca/login?url=
- If they are not already selected, select Web of Science Full Text Links, DOI (Digital Object Identified) and OpenURL. The U of A does not use PubMed LinkOut, so I would suggest not selecting that as it may slow things down.

NOTE: The Find Full Text function relies on appropriate meta-data available at the publisher’s end. Because meta-data may be missing or incomplete at a publisher’s website, EndNote may not retrieve all available full-text. If full-text is not retrieved for a specific article, highlight the article title in your EndNote Library and use the Open Link icon to link out to the full-text via GetIt.
