If the regular authentication window does not allow you to connect to AFS, or you are logging in from home and do not have Samba installed, try using WinSCP to connect via the following steps:

1. At the start button, type in WinSCP and select that program:
2. In the window that opens, enter:
   a. Host name: `gpu.srv.ualberta.ca`.
   b. User name: Your CCID.
   c. Password: Your Password.
3. In the following window, select **Skip**.
4. You should now be logged into your AFS space:

![Image of AFS files in WinSCP]

The pane on the right hand side shows your AFS files that you can copy to the desktop to work on.

5. To log off, simply exit the window and click ok when prompted to terminate the session:
